

## Fire Fighter

firefighter

A fire fighter is a person who puts out fires. He wears a suit to protect himself from the fire. Fire fighters wear masks, hats, and big gloves. They use a hose to spray water on the fire. Water puts out the fire. Sometimes they use an ax to cut doors down to get to the fire.

Fire fighters stay at the fire station until a fire starts. They race to the fire in a red or yellow fire truck. Race means to go fast. The fire truck may use a siren to make a loud noise. The siren warns people that the fire truck is coming. Putting out fires is a dangerous job.
